

**Assignment description:**

Write a PHP script that displays the information (in a table) about all previous orders of the logged in user. All the data is stored in the table 'orders' consisting of the following fields: **user\_id**, **order\_id**, **order\_title**, **deadline\_date** and **deadline\_time**. The table is stored in the system database of CMS Joomla. If there are no orders for a given user the script should display "No orders found!"

You will need a few methods from JFactory: get a current user and open the system database. For more details visit Joomla official website.

**Solution:**

```
<?php
// get a current user from JFactory
$user = & JFactory::getUser();
$id = $user->get('id');
// get system database
$db = & JFactory::GetDBO();
// create a query
$query = "SELECT * FROM orders WHERE user_id = '$id'";
// execute the query
$db->setQuery($query);
$results = $db->loadObjectList();
// if the result is not empty
if (count($results))
{
    echo "<table>";
    echo "<tr><td style='padding:10px'><strong>Order ID</strong></td><td
style='padding:10px'><strong>Order title</strong></td><td
style='padding:10px'><strong>Category</strong><td
style='padding:10px'><strong>Deadline</strong></td></tr>";
    // display each record from $results
}
```

## Assignment 4 Student

The way to your success!

```
foreach($results as $r)
{
    echo "<tr><td style='padding:10px'>".$r->order_id."</td>";
    echo "<td style='padding:10px'>".$r->order_title."</td>";
    echo "<td style='padding:10px'>".$r->deadline_date."<br/>"
    echo ".$r->deadline_time."</td></tr>";
}
echo "</table>";
}
// no results
else
{
    echo "No orders found!";
}
?>
```
